

**About the Spherion Employment Report**

As part of the Spherion® Emerging Workforce® Series of employment surveys, the monthly Spherion Employment Report provides a snapshot of the latest workforce trends across the country and is issued in conjunction with state and national labor market releases. Three key indices are measured: the *Spherion Job Security Index*, which captures how likely respondents think it is that they will lose their job or that their job will be eliminated in the next 12 months; the *Spherion Job Transition Index*, which captures how likely respondents are to look for a new job in the next 12 months and the *Employee Confidence Index* that measures employees' overall confidence in the economy, their employer and their ability to find other employment. The Employee Confidence Index is calculated from the results of four components that reflect these aspects of employee confidence. For each component item a 'score' is calculated by taking the difference of the percentage of positive responses and the percentage of negative responses. These four scores are then averaged to indicate an overall level of employee confidence, with each score ranking on a scale from 0 (no confidence) to 100 (complete confidence). A reading above 50 indicates a positive confidence level.
